

Secure & reliable storage of your data

AZURE CLOUD STORAGE

Cloud storage, as the name suggests, is a remote service provided by a cloud service provider for storage of valuable company data on off-site locations that one can access through a public or private network. Earlier companies stored on-site servers which required them to maintain the data and the servers and infrastructure required to host these massive servers. With the recent explosion of user data, off-site cloud storage solutions have become the go-to for big tech and small startups alike. This makes hosting, securing, managing, and maintaining the servers the providers' responsibility.

Cloud-based storage services are known for their scalability which allows companies to scale up or scale down the amount of space they use every month as per their requirements. In doing so, the companies pay for the storage as a service rather than making huge investments in building and maintaining in-house storage solutions. While your long term costs might accumulate as your data grows, you won't have to go overboard in trying to anticipate future growth.

AZURE KNOWLEDGE

Knowledge is power; knowledge is wisdom; knowledge seems to be the foundational stone of every kingdom. Being inspired by the keen drive for knowledge; Azure is reckoned as a globally trusted company for simplifying and streamlining the process of capturing, managing, organizing, sharing and experiencing market, competitor and organizational data.

500+ fortune companies and their trusted advisors have been relying on Azure & Azure Cloud services to capture, catalog and disseminate their most important and significant assets. With the breadth of experience, width of excellence and length of brilliance, Azure has been predominantly leading the world in data related services in terms of quantity, quality and visualization.

SAVVY SERVICES

Smart Communication

Tools that can effectively offer hyperlocal outreach with cloud-based command centers and processing of outreach programs

Programming & Hosting

Azure's cloud-based Hosted Programming Engine – Xurway

Be-spoke Business Intelligence

Analytical & user-defined custom dashboards agnostic to offer data source, format and size

Data & Analytics

Offering the fastest & easiest ways to capture data from stakeholders using phone, emails, online websites, mobile Apps and In Person Face to Face Media

Mobile Platforms

Develop and deploy Mobile Based Solutions and Workflows for the Centralized Control, Governance and Management.

Virtual Reality Services

Azure's proprietary technology allows creation of 360 degree and VR spaces with High quality and data integration that are user controlled and device agnostic

“ Digitally transform client assets and products for immersive customer experiences and effective digital marketing ”
